Experience

Wave Computing - Research & Development Software Engineer

CAMPBELL, CA

Deep Learning Computational Kernel Development

Dec '17 – present

Wave Computing is developing the next-generation of solutions for speeding up Deep Learning applications using Dataflow Processing Units (DPUs), which contain thousands of interconnected dataflow Processing Elements (PEs). DPUs power Wave Computing's custom appliance for developing, testing, and deploying Deep Learning models. I develop agents (kernel and data movement software kernels) which are executed by Wave Computing's Dataflow Computers for Deep Learning acceleration.

Colfax International - High Performance Computing (HPC) Research Engineer

SUNNYVALE, CA

HPC Computational Fluid Dynamics (CFD) Application Development

Mar '17 – Dec '17

HPC consulting project. I parallelized a CFD simulation code written in C for a client in the oil & gas sector resulting in a ~10X speedup. I have also refactored the client's codebase to enable independent time-evolution in different regions of the simulation via domain-decomposition methods.

C/C++ Compiler Analysis

Nov '17

HPC research project. I investigated suitability of C++ compilers for HPC applications. I developed optimized scientific computational kernels and investigated the performance obtained by each compiler from each kernel. I analyzed compiled binary code to determine reason for differences in performance. A technical report of my findings can be obtained at [Colfax Research](#).

Intel Advisor Lecture

May '17 – Jul '17

I presented a lecture on [Intel Advisor](#) for the Stanford University course ME 344: Introduction to High Performance Computing on July 20th, 2017.

Large Synoptic Survey Telescope (LSST) Data Management (Princeton University)

PRINCETON, NJ

Postdoctoral Research Associate

Sept '15 – Feb '17

LSST Data Management is building a C++ & Python software stack to analyze raw imaging data from LSST. I worked on the software stack to add functionality, documentation, & tests. I developed & implemented algorithm to propagate covariance when stacking images and worked on techniques for optimal image stacking & differential chromatic refraction. I worked on a machine-learning based star-galaxy classifier and on converting the LSST stack to use `py.test`.

Department of Physics & Astronomy (University of Pennsylvania)

PHILADELPHIA, PA

Postdoctoral Researcher

Sept '15 – Feb '17

I developed and implemented a parallelized Bayesian algorithm to estimate orbital parameters from stochastic light curves of binary supermassive black holes. I also developed and implemented Python framework to automatically wrangle astronomical time-series data from a variety of sources including web-servers, SQL servers, data servers and local data files.

Principle Developer

Sept '15 – Feb '17

I architected and implemented `kālī`, an open-source high performance library to model stochastic time-series data in a Bayesian framework. `kālī` is capable of modeling time-series data as variants of C-ARMA processes (a type of Gaussian random process). Written primarily in C++ and exposed to Python using Cython, `kālī` uses scikit-learn for machine learning, Intel MKL for fast linear algebra, Intel Bull Mountain technology for hardware random number generation, & OpenMP 4.0 for vectorization & parallelization. `kālī` is being used to study astronomical time-series data by multiple research groups at Caltech, UPenn, & Drexel.

Department of Physics (Drexel University)

PHILADELPHIA, PA

AGN Variability Analysis

June '09 – Aug '15

I developed C++ software for Intel Xeon Phi accelerator cards to model AGN variability. I developed vectorized & parallelized the C++ pipeline to forward-model and fit data to model using MLE of 2nd-order statistics.

LSST Photo-z Analysis

Sept '08 – May '09

I used MLE & machine learning (neural networks) to establish optimal y-band filter for LSST galaxy photo-z distance estimation.

Department of Physics (Virginia Commonwealth University)

RICHMOND, VA

Adjunct Instructor

Jun '07 – Aug '08

I taught *Introduction to Astronomy* course.

AFM Image Analysis

Aug '05 – May '07

I implemented an IDL pipeline to analyze AFM images of silicon surfaces etched using oxygen.

Department of Physics (University of Richmond)

RICHMOND, VA

Cosmic Microwave Background Analysis

May '03 – May '05

I used IDL to perform statistical tests of the utility of the bispectrum for detection of non-Gaussianity in the CMB.

Education

Drexel University

PHILADELPHIA, PA

PhD. in Physics

2008 – 2015

Probing AGN Accretion Physics through AGN Variability: Insights from *Kepler*

Virginia Commonwealth University

RICHMOND, VA

M.S in Physics & Applied Physics

2005 – 2007

CAFM Studies of Epitaxial Lateral Overgrowth GaN Films

University of Richmond

RICHMOND, VA

B.S. in Mathematics & Physics

2001 – 2005

The Bispectrum as a Quantifier of non-Gaussianity in the Cosmic Microwave Background

Certifications

deeplearning.ai

COURSERA.ORG

Neural Networks and Deep Learning

Certificate earned on November 4, 2017.

Improving Deep Neural Networks: Hyperparameter tuning, Regularization and Optimization

Certificate earned on November 26, 2017.

Structuring Machine Learning Projects

Certificate earned on December 17, 2017.

Convolutional Neural Networks

Certificate earned on January 22, 2018.

Skills

Technical expertise: My expertise lies in the design & implementation of high-performance scientific/numerical software. I am skilled at applying statistical analysis and machine learning methodology to complex data and am familiar with developing Deep Learning applications using TensorFlow & Keras. Used to working with(in) teams, I am fond of using Agile methodologies (Scrum) and continuous integration (Jenkins) to manage & deliver on-time & bug-free software. I enjoy writing C, C++, & Python, and am learning Julia/Go/IO/Prolog. I have excellent knowledge of parallelization technologies: OpenMP, C++11 threads, POSIX threads, & MPI as well as experience programming on novel computing platforms such as Wave Computing's Dataflow Processing Units (DPU) & Intel's Xeon Phi (Knight's Corner & Knight's Landing). I have extensive knowledge & experience with various programming toolchains including the GNU toolchain, Intel toolchain, LLVM toolchain, PGI toolchain, AOCC toolchain, Valgrind, gdb, make, SCons etc.... My preferred platform is Linux (16 years of development experience) although I have also developed on Mac OSX (7 years). I am very comfortable with writing in \LaTeX (13 years of experience) and have a good understanding of the UNIX programming environment and tools (Memory management, process spawning, etc...)

Public speaking: With years of experience delivering highly technical talks to both expert & general audiences, I am comfortable with public speaking & outreach.

Natural languages: English (*native language*) and Hindi (*native language*).
