Experience

Intel Corporation - Senior Deep Learning Software Engineer

SANTA CLARA, CA

I work in the Machine Learning Performance (MLP) organization in the Machine Learning Distributed Compute (MLDC) group on accelerating Deep Learning workloads on Intel's Xe-HPC discrete accelerator cards for Deep Learning & High-Performance Computing. My role focuses on pre-Si performance optimization via hardware-software co-design. I develop & test computation- & communication-kernels using hardware simulators.

Hardware-Software Co-Design

April '19 – present

My responsibilities include

- defining architectural features for enhancing the architecture for Deep Learning workloads.
- driving adoption of best practices, i.e. architecture-specific know-how, in software products.
- evaluating & projecting pre-Si Deep Learning workload performance.
- creating the overall strategy for distributing Deep Learning workloads across multiple-cards & -nodes i.e. scale-up/scale-out strategy.

oneCCL Development

October '20 – present

I am responsible for

- researching & implementing superior algorithms for hierarchical & non-hierarchical collective communication kernels.
- developing collective communication kernels for low-precision datatypes (bfloat16, fp16, etc...).

post-Si Performance Validation

October '20 – present

My contributions include

- developing performance validation tests for scale-up & scale-out.
- working with the performance validation team to understand the observed performance behavior of new hardware.

Wave Computing - Senior Staff Research & Development Software Engineer

CAMPBELL, CA

Wave Computing is developing the next-generation of solutions for speeding up Deep Learning applications using Dataflow Processing Units (DPUs), which contain thousands of interconnected dataflow Processing Elements (PEs). DPUs power Wave Computing's custom appliance for developing, testing, and deploying Deep Learning models. I use to develop the compute- and data movement- software kernels which are executed by Wave Computing's Dataflow Processing Units (DPUs) for Deep Learning acceleration.

Deep Learning Kernel- & Library-Development

Dec '17 – April '19

I have worked extensively on compute- & communicate-kernels, tools, and the supporting library for enabling Deep Learning workloads on Wave's DPUs.

- Developed compute kernels for various Deep Learning layers such as Average Pooling, Convolutions, Feed-Forward, Activations, Concatenation & fork, etc...
- Developed a tool for visualizing the place & route performed by JitPR.
- Owner of the library of routines for performing IEEE 754 rounding.
- Owner of the library of routines for changing precision.
- Authored various block Matrix Multiplication operations.
- Authored various multi-byte addition operations.
- Authored various multi-byte shift operations.

Tools Development

Nov '18 – Apr '19

I have developed tools for

- Simulating (functional & performance) Deep Learning kernels.
- Visualizing the placement & routing performed by JitPR.

Management Role

March '18 – April '19

I assisted my superior with the management of the kernel team consisting of seven engineers. My duties included

- maintaining the schedule of work being done by the members of the team.
- assisting in the planning of new work items.
- identifying & interviewing new compute-kernel team candidates.
- report on the progress of the compute-kernel team to the VP of product engineering.

Major accomplishments include

- I developed a workflow for creating new compute-kernels.
- I integrated the schedule of work into a JIRA managed project.

The outcome of my efforts is better project management leading to a significant reduction in the time taken to develop new compute-kernels.

Colfax International - High Performance Computing (HPC) Research Engineer SUNNYVALE, CA

HPC Computational Fluid Dynamics (CFD) Application Development Mar '17 – Dec '17

HPC consulting project. I parallelized a CFD simulation code written in C for a client in the oil & gas sector resulting in a $\sim 10X$ speedup. I have also refactored the client's codebase to enable independent time-evolution in different regions of the simulation via domain-decomposition methods.

C/C++ Compiler Analysis Nov '17

HPC research project. I investigated suitability of C++ compilers for HPC applications. I developed optimized scientific computational kernels and investigated the performance obtained by each compiler from each kernel. I analyzed compiled binary code to determine reason for differences in performance. A technical report of my findings can be obtained at [Colfax Research](#).

Intel Advisor Lecture May '17 – Jul '17

I presented a lecture on [Intel Advisor](#) for the Stanford University course ME 344: Introduction to High Performance Computing on July 20th, 2017.

Large Synoptic Survey Telescope (LSST) Data Management (Princeton University) PRINCETON, NJ

Postdoctoral Research Associate Sept '15 – Feb '17

LSST Data Management is building a C++ & Python software stack to analyze raw imaging data from LSST. I worked on the software stack to add functionality, documentation, & tests. I developed & implemented algorithm to propagate covariance when stacking images and worked on techniques for optimal image stacking & differential chromatic refraction. I worked on a machine-learning based star-galaxy classifier and on converting the LSST stack to use py.test.

Department of Physics & Astronomy (University of Pennsylvania) PHILADELPHIA, PA

Postdoctoral Researcher Sep '15 – Feb '17

I developed and implemented a parallelized Bayesian algorithm to estimate orbital parameters from stochastic light curves of binary supermassive black holes. I also developed and implemented Python framework to automatically wrangle astronomical time-series data from a variety of sources including web-servers, SQL servers, data servers and local data files.

Principle Developer Sept '15 – Feb '17

I architected and implemented [KALÍ](#), an open-source high performance library to model stochastic time-series data in a Bayesian framework. [KALÍ](#) is capable of modeling time-series data as variants of C-ARMA processes (a type of Gaussian random process). Written primarily in C++ and exposed to Python using Cython, [KALÍ](#) uses scikit-learn for machine learning, Intel MKL for fast linear algebra, Intel Bull Mountain technology for hardware random number generation, & OpenMP 4.0 for vectorization & parallelization. [KALÍ](#) is being used to study astronomical time-series data by multiple research groups at Caltech, UPenn, & Drexel.

Department of Physics (Drexel University) PHILADELPHIA, PA

AGN Variability Analysis June '09 – Aug '15

I developed C++ software for Intel Xeon Phi accelerator cards to model AGN variability. I developed vectorized & parallelized the C++ pipeline to forward-model and fit data to model using MLE of 2nd-order statistics.

LSST Photo-z Analysis Sept '08 – May '09

I used MLE & machine learning (neural networks) to establish optimal y-band filter for LSST galaxy photo-z distance estimation.

Department of Physics (Virginia Commonwealth University) RICHMOND, VA

Adjunct Instructor Jun '07 – Aug '08

I taught *Introduction to Astronomy* course.

AFM Image Analysis Aug '05 – May '07

I implemented an IDL pipeline to analyze AFM images of silicon surfaces etched using oxygen.

Department of Physics (University of Richmond) RICHMOND, VA

Cosmic Microwave Background Analysis May '03 – May '05

I used IDL to perform statistical tests of the utility of the bispectrum for detection of non-Gaussianity in the CMB.

Education

Drexel University

PhD. in Physics

Probing AGN Accretion Physics through AGN Variability: Insights from *Kepler*

PHILADELPHIA, PA

2008 – 2015

Virginia Commonwealth University

M.S in Physics & Applied Physics

CAFM Studies of Epitaxial Lateral Overgrowth GaN Films

RICHMOND, VA

2005 – 2007

University of Richmond

B.S. in Mathematics & Physics

The Bispectrum as a Quantifier of non-Gaussianity in the Cosmic Microwave Background

RICHMOND, VA

2001 – 2005

Certifications

deeplearning.ai

COURSERA.ORG

Custom Models, Layers, and Loss Functions with TensorFlow

Certificate earned on December 17, 2020.

Deep Learning Specialization

Certificate earned on June 24, 2018.

Sequence Models

Certificate earned on June 24, 2018.

Convolutional Neural Networks

Certificate earned on January 22, 2018.

Structuring Machine Learning Projects

Certificate earned on December 17, 2017.

Improving Deep Neural Networks: Hyperparameter tuning, Regularization and Optimization

Certificate earned on November 26, 2017.

Neural Networks and Deep Learning

Certificate earned on November 4, 2017.

Skills

Technical expertise: My expertise lies in the research, design & implementation of high-performance scientific/numerical software on exotic, highly-parallel, and distributed hardware. Current interests include hardware-software co-design, particularly in the area of AI accelerators. I earned my doctorate in Astrophysics by applying mathematical & statistical analysis and machine learning to complex time-domain data. While I am familiar with developing Deep Learning applications using TensorFlow & PyTorch, my speciality lies in knowledge of the innards of these frameworks & their execution on various accelerators such as GPUs, DPUs, etc.... Used to working with(in) teams, I am fond of using Agile methodologies (Scrum) and continuous integration (Jenkins) to manage & deliver on-time & bug-free software. I enjoy writing C-For-Metal, OpenCL, FlowGraph, C, C++, & Python, and am learning Julia/CUDA/Go/IO/Prolog. I have excellent knowledge of parallelization technologies: OpenMP, MPI, C++11 threads, & POSIX threads, & hardware architecture. Over the years, I have gained extensive experience programming on novel computing platforms such as Intel's Xe-HPC accelerators, Wave Computing's Dataflow Processing Units (DPU) & Intel's Xeon Phi (Knight's Corner & Knight's Landing). I have extensive knowledge & experience with various programming toolchains including the Intel toolchain, GNU toolchain, LLVM toolchain, PGI toolchain, AOCC toolchain, Valgrind, gdb, make, SCons etc.... My preferred development platform is Linux (≥ 15 years of development experience) although I have also developed on Windows (1 year of dev-ex), & Mac OSX (7 years of dev-ex). I am very comfortable with writing in \LaTeX (≥ 15 years of experience) and have a good understanding of the UNIX programming environment and tools (memory-management, process spawning, etc...)

Public speaking: With years of experience delivering highly technical talks to both expert & general audiences, I am comfortable with public speaking & outreach.

Natural languages: English (*native language*) and Hindi (*native language*).
